DETAILED ACTION

Applicant argues that those of ordinary skill in the art would not have been motivated to specifically select combination of ondansetron and fluoxetine, because it is merely one of numerous possible combinations disclosed in the Johnson patent. Applicant further argues that the Young patent discloses nothing whatsoever regarding the desirability of that specific combination. However, the examiner does not agree with applicant's implication that the combination of ondansetron and fluoxetine is merely one of numerous possible combinations. It is noted that Johnson teaches a small Markush Group of only 12 5-HT reuptake inhibitors that includes fluoxetine (claim 7) is possible to envision to those of ordinary skill in the art, and therefore, one of ordinary skill would have been motivated to select fluoxetine as a 5-HT reuptake inhibitor. A genus may be so small that, when considered in light of the totality of the circumstances, it would anticipate the claimed species or subgenus. For example, it has been held that a prior art genus containing only 20 compounds and a limited number of variations in the generic chemical formula inherently anticipated a claimed species within the genus because "one skilled in [the] art would... envisage each member " of the genus. In re Petering, 301 F.2d 676, 681, 133 USPQ 275, 280 (CCPA 1962). Accordingly, it would have been obvious to one of ordinary skill in the art to select fluoxetine from claim 7 to combine with ondansetron in view of the disclosure of claim 2. Young is cited solely for the teaching of optically pure R(+) ondansetron or salt thereof, substantially free of its S(-) stereoisomer for the treatment of diseases, while decreasing the usual adverse effects (column 5, lines 61-67).

Art Unit: 1615

Applicant's argument regarding the Young patent is not understood. It is clearly disclose in the Young patent that usual effects are decreasing in the use of optically pure R(+) ondansetron or salt thereof, which is substantially free of its S(-) stereoisomer for the treatment of behavioral disorders including depression, intense sadness or agitation (column 5, lines 61-67; and column 6, lines 1-5).

Correspondence

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Susan T. Tran whose telephone number is (571) 272-0606. The examiner can normally be reached on M-R 6:00 am to 4:30 pm; Thurs. (telework).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward can be reached on (571) 272-8373. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Application/Control Number: 10/665,430
